EXAMINER'S AMENDMENT

- An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
- Authorization for this examiner's amendment was given in a telephone interview with Mr. William C. Rowland on, 02 September 2004.
- The application has been amended as follows:
- In Claim 11, lines 1-2, please change, "A computer program product making a computer execute the steps of " to read --A computer program embodied in a computer readable medium for performing the steps of--.
- In Claim 12, lines 1-2, please change, "A computer program product making a computer execute the steps of " to read --A computer program embodied in a computer readable medium for performing the steps of--.
- In Claim 13, lines 1-2, please change, "A computer program product making a computer execute the steps of " to read --A computer program embodied in a computer readable medium for performing the steps of--.

REASONS FOR ALLOWANCE

➤ The following is an examiner's statement of reasons for allowance: The present invention is directed towards an image processing method and apparatus. Independent claims 1,10,11 and 13 identify the uniquely distinct feature, "for determining scene information indicating a character of a received image while deciding a correction level for correcting said image in accordance with said determined scene information and correcting said image in a uniform color space in accordance with said decided correction level"; while claims 8 and 12 identify the uniquely distinct feature, "for detecting an attribute of each of plurality of rectangular regions based on a transformed color signal while deciding a correction level for each of said rectangular regions in accordance with said detected attribute and correcting a received image for each of said rectangular regions in a uniform color space in accordance with said decided correction level". The closest prior art, Spaulding et al. (USPN 5,805,213) disclose wherein multi-channel color image signals from a digital camera having multi-channel image sensors are corrected to account for variations in scene

illuminant, this is accomplished by determining the scene illuminant and determining an optimum color correction transformation in response to the scene illuminant which transform minimizes color errors between an original scene and a reproduced image by adjusting three or more parameters, while Gindele et al. (USPN 6,594,388 B1) disclose color image reproduction of scenes with preferential color mapping and scene dependent tone scaling, either singularly or in combination, fail to anticipate or render the above underlined limitation obvious.

- Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
